## Solutions

- Item Change Combined Reporting tool
- Parts Class and Ch

## Summary

Extreme Networks partnered with Domain Systems for their Oracle Agile expertise and their Agile custom tools and utilities. In this case, the client required a report generation tool that would combine the features of both Item and Change Activity Report in their Oracle Agile system.

## Challenges

An interface would be needed to allow the user to select the attributes from Parts Class and Change Class, as well as provide an option to query for pending changes and/or change history items. An INI file would also be required to save all settings necessary for the application to run. The Agile Report Generation tool does not have provisions for such a combined report.

Used Domain Systems Item Change Combined Report tool to Query items with pending changes or items with change history and output the data extracted from Parts Class and Change Class into an ASCII text delimited file. Domain Systems Interface provided a Tree View control to select attributes, drag and drop feature on the selected attributes thereby giving flexibility to the user to arrange the data in the manner they desired.

## Results

The customer can now extract items with pending changes or items with change history in mere minutes (instead of days when done manually). The tool saving Extreme Networks in terms of time, cost and effort.
